Indirect Gas Fired Model Lengths: 96"–144" Environmental Separation (up to 16') Insect Control (up to 14')

#### atmosphere is everything

14716 S. BROADWAY, GARDENA, CA 90248 • Ph: (310)532-1555 • Fax: (310)-532-3030 • www.marsair.com © Copyright Mars Air Systems, LLC 2014

#### Notes:

1. Internal junction boxes provided for electrical wiring: (1) 2"x4" box for one-motor units, (1) 4"x4" box for two-motor units, (2) 4"x4" box for three-motor units.

2. Recommended service clearances are 2" to the left and right sides, 24" on top, and 36" in front of the unit.

3. Circuit protection (per NEC) to be installed by others.

4. To prevent accidental damage during operation, unit must be installed so that the bottom of the air curtain does not extend below the door header.

5. Unit can be fastened to wall on both ends without intermediate support.

\* – Use corresponding letters in "Electrical Data" column headers (see page 2) to complete the model numbers. Note: above data is for 60 Hz at 3450 RPM. For 50 Hz, RPM is 2850

with a 17% reduction in performance.

# **EP2 (Extra Power 2) Series**

Indirect Gas Fired Model Lengths: 96"–144" Environmental Separation (up to 16') Insect Control (up to 14')

#### Standard Features:

#### Air Curtain and Transition

- Air curtain ETL-certified to conform to UL 507 (US) and CSA 22.2 (Canada) standards for indoor use
- Sleek self-contained one-piece heavy-gauge corrosion-proof paint lock metal design
- Rust preventative electrostatic polyurethane powder coating
- Standard color is Titanium Silver (TS)
- ✤ 3 HP continuous duty Totally Enclosed Air Over (TEAO) motors (NEMA 1)
- Adjustable air directional vanes with 40° sweep front to back
- Transition is shipped KD (Knocked Down) to minimize freight and storage expenses
- Transition pieces are provided with pilot holes for easy field assembly (Hardware included)
- 12-month parts warranty
- Freight not included
- Proudly made in the USA

#### Indirect Gas Fired Furnaces

- ETL verified to be 83% efficient
- In-shot burner technology
- Aluminized tubular heat exchanger (20 gauge)
- Positive pressure 120V impellers (separate 115V, 1Ø power required)
- Power vented exhaust
- Single stage gas valve
- Standard direct spark ignition
- Certified for Category I and III Venting
- Natural Gas
- Factory test fired
- Overhead mounting hardware provided (2 per furnace)

#### Mars Recommended Accessories (see catalog for complete listing):

- Door Limit Switches (§)
- 99-125, Industrial surface mounted magnetic switch (controller required)
   Controllers (§)
- Code) (§)
- MCP-TD, Adjustable time delay, 1sec-100hr (panel required)
- <u>Thermostats</u> (§)
- 99-264, Thermostat, low voltage up to 24V max, single stage, single pole, R, G, W
- Furnace options
- IDF-2STG, Two-stage heat exchanger
- IDF-SS, 409 stainless steel heat exchanger

□ IDF-MOD-RS, Electronic modulating gas valve for room sensor (0-10Vdc/4-20mA control provided by others)

(§) = Shipped loose

#### Sound Levels (measured at 10' in a free field):

2 Motor Unit = 79 dBA, 3 Motor Unit = 81 dBA

MARS SALE ORDER /QUOTE #:	EMAIL:

## **SUBJECT: PRODUCT APPLICATION**

Thank you for the above purchase order.

The MARS EP2 series air curtains are specifically designed for manufacturing facilities with openings from 12 to 16 feet high. The decibel reading for the EP2 series is high due to the 2 pole motor design. We do not recommend the installation of the EP2 series directly above or near employees and/or in enclosed areas where sound may reverberate.

To avoid a dissatisfied customer and possible return and restocking fees, please contact your customer and confirm that these units will be mounted at the suggested height requirement and appropriate location. This policy has been implemented to provide the highest quality of customer service for you and your customer.

We appreciate your prompt attention to this matter. If the selection of the EP2 model is acceptable, please sign in the spaces provided below and fax or email back to our order entry department at 310-324-3030.

If you have any further questions regarding this matter, please feel free to contact us at 310-532-155 x210 or at <u>info@marsair.com</u> or <u>orders@marsair.com</u>.

#### Line voltage to low voltage Models

atmosphere is everything

14716 S. BROADWAY, GARDENA, CA 90248 • Ph: (310)532-1555 Fax: (310)-532-3030 • <u>www.marsair.com</u> © Copyright Mars Air Systems, LLC 2014

Part Number	Description	Applicable Air Curtain Series
99-063	Line voltage, up to 240v, analog, single stage, single pole	All Hot Water/Steam
99-064	Line voltage, up to 240v, analog, two stage, double pole	WM/BD Electric Heat
99-264	Low voltage, 24v, digital, non-programmable, single pole, R.G.W.	All Electric Heat except WM/BD, All Gas Fired
99-186	Low voltage, 24v, digital, programmable, single pole, R.G.W.	All Electric Heat except WM/BD, All Gas Fired

#### Features:

- \* Automatic and manual control of the heat while the air curtain is energized
- Fan on/off control
- Remote mounted and field wired by others (eye level within 3 feet of the unit)
- Temperature range from 50F to 90F
- Analog Bimetal Temperature Sensing
- Thermostats are UR (UL Recognized)
- 1 year warranty

#### Line Voltage (99-063, 99-064)

- Line voltage, up to 240v
- Analog
- Non-programmable
- Requires Junction Box (J-Box field supplied and installed)

#### Low voltage (99-264)

- Low voltage (24V) control
- Digital
- Non-programmable
- Fan and Heat Control

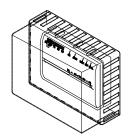

#### Low voltage (99-186)

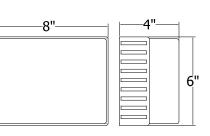

- Low voltage (24V) control
- Digital
- 7-day programmable
- Fan and Heat Control

Note: Do not mount low voltage thermostat greater than 30ft from the air curtain. Mounting the low voltage thermostat too far from the air curtain may cause a voltage drop and cause chattering.

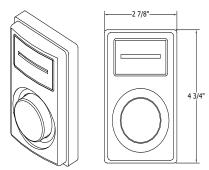

#### **Options and Accessories:**

- MTD-ACC, Factory installed and wired thermostat on the air curtain housing
- 99-182, Lockable clear cover
- 99-192, Remote indoor sensor for programmable thermostat 99-186
- 99-195, Remote outdoor sensor for programmable thermostat 99-186
- 99-375, NEMA 4X Thermostat, up to 240v, analog, single stage, single pole (outdoor sensing)

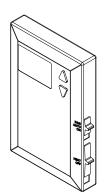

99-182 - Cover, Lockable, Clear

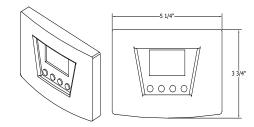

99-063 – Thermostat, 801, Line Voltage, Single Stage, Single Pole

99-264 – Thermostat, 24 Volt, Digital, Non-Programmable, Single Pole, R.G.W.

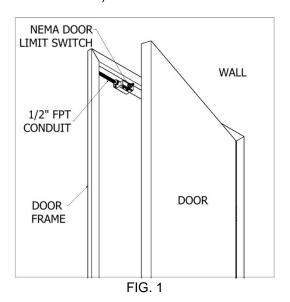

99-186 – Thermostat, 24 Volt, Digital, Programmable, Single Pole, R.G.W.

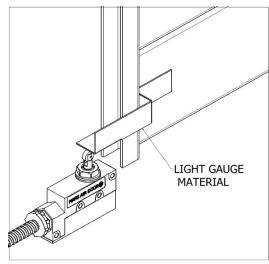

# ACCESSORY INSTALLATION SUPPLEMENT

#### **Door Limit and Magnetic Reed Switches**

1. Mars door limit and magnetic reed switches are available with NEMA 1, 4X and 7 ratings. Contact the factory for additional ratings and details. (See FIG. 1 for typical single swing, hinged door type, door limit switch installation)

 Use light gauge materials when field fabricating brackets to activate and deactivate the door limit switch(s). (FIG. 2) Figure 2 also shows the typical installation of the combination plunger/roller type NEMA 1 door limit switch, for all non-hinged style doors.

- 3. All wiring must be per local and NEC (National Electric Code) codes.
- 4. Panels or controllers may be required. Refer to wiring diagram inside the control panel box.

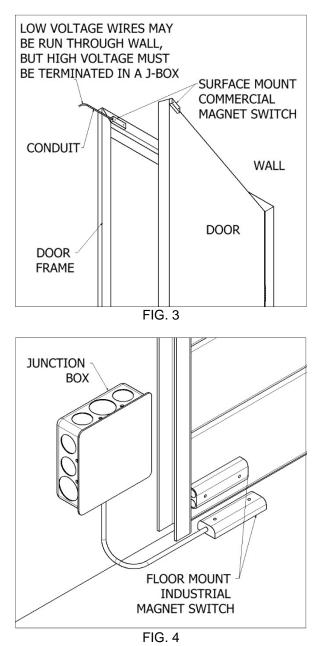

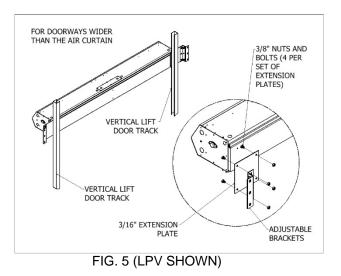

FIG. 2

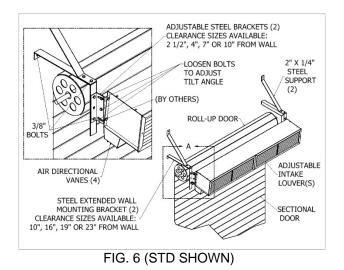

atmosphere is everything

#### **Bracket Installation**

1. Side Extension Plates: For doorways wider than the air curtain, use combination of Side Extension Plates and Adjustable Mounting Brackets. (FIG. 5)

 Adjustable Mounting Brackets: For installation of air curtain over drum-style roll-up door, use Extended Wall Mounting Brackets. (FIG. 6)

- 3. Extended Wall Mounting: For Tandem Mounting of air curtain over sectional style door, use either wall mounting angle brackets or threaded rods.
- 4. Top Mounting Brackets: For overhead installation of units, use in conjunction with the threaded holes provided on top of unit.

**Note:** Angle brackets, threaded rods and I Beams are provided by others. (FIGS. 7 & 8) All optional brackets are not available for WMI/WMH and BD Series.

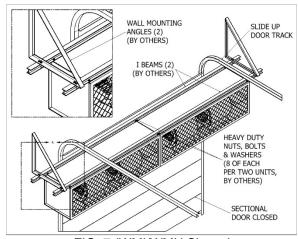

FIG. 7 (WMI/WMH Shown)

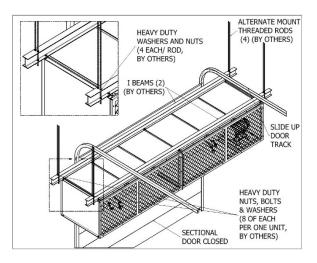

FIG. 8 (BD Shown)

# STERLING "XF" SERIES CONVERTIBLE VENTING TYPE TUBULAR PROPELLER UNIT HEATER

#### DESCRIPTION

The Sterling "XF" Series Convertible Venting Type Tubular Propeller Gas-Fired Unit Heater offers a highly efficient, extremely durable alternative to the traditional clam shell design. These propeller type units combine the latest tubular heat exchanger and in-shot burner technology with the quality and reliability you have come to know from Sterling. Units are available in sizes 100 to 400 MBH and have been certified by ETL as providing 83% thermal (combustion) efficiency.

#### **CONVERTIBLE VENTING - STANDARD OR SEPARATED COMBUSTION**

Notably, the Sterling "XF" unit heater is designed so it can be installed in either standard or separated combustion venting configurations without requiring modification to the unit itself. Located on the rear cover panel of each unit, combustion air inlet collars are left open in a standard combustion venting configuration. When set up for separated combustion, combustion air piping is connected to the inlet collars so that the burners, spark ignitor, and flue system are enclosed within the unit, allowing the entire combustion process to remain unaffected by the atmosphere in the space where the heater is located. Separated combustion venting configurations should be used where dusty, dirty or mildly corrosive conditions exist, or where high humidity or slightly negative pressures prevail.

#### ADDITIONAL VENTING FLEXIBILITY

The Sterling "XF" unit heater is ETL certified in accordance with categories I and III venting requirements. This certification allows units to be vented both vertically and horizontally using either single wall or double wall venting materials. Available as an accessory option, Sterling offers a Combustion Air Inlet Kit that allows for concentric venting of both combustion and exhaust air systems through one termination.

#### **TUBULAR HEAT EXCHANGER**

The Sterling tubular heat exchanger has been designed to provide maximum and uniform heat transfer. The low pressure drop associated with this design enables heated air to be evenly distributed to the conditioned space. This curved, non-welded serpentine design experiences less thermally induced stress making it highly durable for significantly longer service life. All Sterling tubular heat exchangers are constructed of heavy duty 20-gauge aluminized steel. Optional 409 stainless steel heat exchangers are also available.

#### DIRECT SPARK IGNITION SYSTEM & CONTROL ACCESSIBILITY

Sterling "XF" units utilize a direct spark pilotless ignition of the burner, providing fast heat delivery. This highly reliable and efficient ignition system incorporates an integrated electronic control board to regulate the system sequence of operation, including an externally mounted LED indicator for simple troubleshooting. Designed with the service person in mind, ignition and fan controls are located in one centrally located control panel.

#### CAUTIONS

Combustion air and vent systems must be installed in accordance with current National Fuel Gas Code or Installation Code, Installation Code for Natural Gas Burning Appliances and Equipment (Canada) and any local and state codes. Units should not be installed where negative pressures are significant, where vapor containing chlorine or fluorine may be present or in any areas classified as "hazardous."

#### STANDARD FEATURES

- Designed for either standard or separated combustion
- 20-gauge aluminized steel tubular heat exchanger
- 83% thermal efficiency
- ODP propeller motor (with overload protection)
- Power venter
- Combustion air pressure switch
- 20-gauge steel cabinetry with baked enamel finish
- Direct spark ignition system
- 115/24 volt control transformer
- 115/1/60 supply voltage
- Redundant single stage gas valve
- Rear access to in-shot burners
- Individually adjustable and removable horizontal louvers
- · Complete fan guard
- Main control panel
- 10 year heat exchanger, flue collector and burner warranty

#### **OPTIONAL FEATURES**

PROJECT: \_\_\_\_\_

- Stainless steel heat exchanger, burners, and/ or flue collector
- Two stage and various electronic modulation gas controls
- Discharge nozzles (30°, 60° & 90°)
- Combustion air inlet kits (allows concentric venting with horizontal or vertical termination)
- TE propeller motor
  Supply voltages: 208 & 230/1/60 and 208, 230, 460, 575/3/60

† Ratings shown are for unit installations at elevations between 0 and 2,000 ft (0 to 610m). For unit installations in U.S.A. above 2,000 ft. (610m), the unit input must be field derated 4% for each 1,000 ft. (305m) above sea level; refer to local codes, or in absence of local codes, refer to the latest edition of the National Fuel Gas Code, ANSI Standard Z223.1 (N.F.P.A. No. 54).

For installations in Canada, any reference to deration at altitudes in excess of 2,000 ft. (610m) are to be ignored. At altitudes of 2,000 ft. to 4,500 ft. (610 to 1372m), the unit must be field derated and be so marked in accordance with the ETL certification. See unit installation manual for field deration information.

\* Flue collar is factory supplied with unit; to be field installed per included instructions.

## Installation, Operation and Maintenance Manual

Read these instructions carefully before assembling, installing, operating, or maintaining the product. Follow all safety guidelines to avoid injury or damage. Keep these instructions for future reference.

Warning: To reduce the risk of fire, electric shock, or injury to persons, do not use replacement parts that have not been recommended by the manufacturer.

#### OVERVIEW

Mars Air Curtains are designed to cover door openings, providing both temperature control/environmental separation and flying insect control, when the building's doors are opened. Typical installation heights are: Standard 2 Series

(Environmental Separation up to 12', Flying Insect Control up to 10'), High Velocity 2 Series (Environmental Separation up to 14', Flying Insect Control up to 12'), and Extra Power 2 Series (Environmental up to 16', Flying Insect Control up to 14'). All ETL Sanitation Certified Series should be mounted at 7' for Flying Insect Control. The units are typically wall mounted horizontally above the door opening. They can also be suspended from the ceiling or vertically mounted alongside the opening. The units are ETL Listed for either an inside or outside mount. Heated units must be mounted on the inside or the protected side of the opening. The motors used in the Standard 2, High Velocity 2 and Extra Power 2 Series are 1/2HP, 1HP and 3HP, respectively. The ETL Sanitation Series utilizes 1/2HP and 1HP motors.

The Standard 2, High Velocity 2 and Extra Power 2 Series come standard with an air intake grille. They can also be configured with an aluminum mesh air intake filter instead of the air intake grille or in conjunction with it.

# WARNING

When servicing the product, motor may be hot enough to cause pain or injury. Allow motor to cool before servicing.

#### GENERAL SAFETY INFORMATION

Use this product only in the manner intended by the manufacturer. If you have any questions, contact the manufacturer. Only qualified personnel should install this product. Installing personnel should have a clear understanding of these instructions and should be

aware of general safety precautions. Improper installation can result in electric shock, possible injury due to coming in contact with moving parts, as well as other potential hazards.

# WARNING

4

To reduce the risk of fire, electric shock, or injury to persons, observe the following.

- A. Always disconnect, lock and tag power source before installing or servicing product.
- B. Installation work or electrical wiring must be done by qualified person(s) in accordance with all applicable codes and standards, including fire-rated construction.
- C. The combustion airflow needed for safe operation of fuel burning equipment in the area may be affected by the product's operation. Follow the heating equipment manufacturer's guideline and safety standards, such as those published by the National Fire Protection Agency (NFPA), the American Society of Heating, Refrigeration and Air Conditioning Engineers (ASHRAE) and local code authorities.
- D. When cutting or drilling into a wall or ceiling, be careful not to damage electrical wiring and other hidden utilities.

## **RECEIVING AND INSPECTION**

Upon receiving the product, check to make sure all items are accounted for by referencing the Bill of Lading to ensure all items were received. Inspect each carton for shipping damage before accepting delivery. Notify the freight carrier if any damage is noticed. The carrier will make notification on the delivery receipt acknowledging any damage to the product. All damage should be noted on all copies of the Bill of Lading which is countersigned by the delivering carrier. A Carrier Inspection Report should be filled out by the carrier upon arrival and a report given to the Traffic Department. If damaged upon arrival, file a claim immediately with the carrier. Any physical damage to the unit after acceptance is not the responsibility of Mars Air Systems.

#### UNPACKING

Verify that all parts, components and accessories, and the correct quantities of each have been received. If any items are missing, report shortages to Mars Air Systems directly to arrange for obtaining the missing items. Again, verify quantities received against those on the Bill of Lading only, as multiple shipments may be involved.

#### INSTALLATION

## Typical Mounting – Wall or Ceiling Mounted Horizontally Above the Door Opening

- 1. Remove the air intake grille(s) and/or filter(s) from the product and set aside. Only products 48" or less, except HV2 and EP2 models, are shipped with the motor fan assembly (MFA) mounted inside.
- Measure the housing and center it over the opening. 2. The air curtain shall be equal to or greater than the width of the opening.
- 3. Total of two (2) key-hole slots and six (6) pre-punched mounting holes are provided for your convenience. The 7/16" pre-punched holes (4) provided, (2) on each end for top/celling mounts. The 1/2" key-hole slot and 7/16" pre-punched hole (2) provided, (2) on each end for wall mounts. These holes must be utilized to secure the product to the wall or ceiling. If necessary, holes may be drilled inside the product to align with the stud spacing. All hardware is field provided by others.
- Mount the product such that the discharge is 1" above 4 the opening and all obstacles. (FIG. 1) Note: If the product is installed higher than the recommended 1" above the opening, then it must be moved 3/8" away from the wall for every 1" that it is moved up. Any void between the wall and the product must be sealed, by others, to optimize performance.

- 5. Use four (4) threaded rods for overhead installation or four (4) threaded bolts for wall installation. All hardware is field provided by others. (FIG. 1)
- 6. If applicable, optional Adjustable Mounting Brackets, Side Extension Plates and Extended Wall Mounted Brackets are also available for installations over a Vertical Lift or Drum Roll-up type door. (Reference **Accessory Installation Supplement**)
- 7. If applicable, for tandem installation or products mounted side by side, allow no more than 6" between the two products. For overhead installation using threaded rods, the products may require a beam, by others, to span the full distance of the mounting length. (Reference Accessory Installation Supplement)
- 8. All wires must be connected internal of the unit and some knockouts are provided. However, it may be necessary to create your own knockout, as required.
- 9. The unit must be wired per NEC and local codes.

FIG. 1

#### Motor Fan Assembly Installation and Electrical Field Wiring

- 1. Once the housing is installed over the opening, the Motor Fan Assembly (MFA) must be re-placed and securely fastened. For products with the MFA shipped loose, wing nuts or hex nuts are provided inside the unit (FIG. 2). For heated MFA installation, reference Heated Products Supplement Sheet.
- 2. The unit and any optional accessories must be wired with the proper voltage to the junction box per the wiring diagram. (FIG. 3, unheated products only)
- 3. All 3 phase motors are bi-directional, which means they can rotate in either direction. Follow directional arrows on the blower wheel housings for proper rotation. If the motor is rotating incorrectly, switch two of the 3 phase

- 4. power or motor leads and the motor will rotate the opposite direction. Make sure all motors are turning in the same and proper direction. (FIG. 2)
- 5. Replace the air intake grille(s) or filter(s) once the product has been properly tested.

NOTE

For accessory installation, reference Accessory Installation Supplement.

For heated products, reference Heated Products Supplement.

# START-UP

This product has been assembled and tested at the factory prior to shipping. The following procedures should be performed to assure its performance. Before continuing with the start-up, it is important to recognize the safety controls furnished with the unit.

# WARNING

The following items must all be completed by a qualified installer and checked off when completed

- A. Re-check that the product has been installed properly and is level and secure.
- B. Check all terminal screws are tight and field wiring is connected in accordance to National Electrical Code and wired per the enclosed wiring diagram. For electric heated models, ensure that the coils are secured and not touching each other on any metal surface.
- C. Verify proper voltage prior to powering the product. (See product label for reference).
- D. Check all field wired components "if supplied" are wired correctly.
- E. Check that the inlet air supply and the discharge air supply are free of obstructions.
- F. Check that all air filter(s) and/or air intake grille(s) are in place and installed properly, as originally shipped.
- G. Verify voltage to the product once more and turn power on.
- H. Regardless of whether the product is mounted on the inside or outside of the door opening, set the air directional vanes in the discharge nozzle slightly outward to approximately 10-15° towards the outside, or the wind load. (FIG. 4)

- I. For products with control panels, turn the HOA (Hand-On-Auto) selector switch to "On" position and open the door to energize the product. For products without a control panel or an On/Off switch, open the door to energize the product.
- J. If heated products are installed, reference **Heated Products Supplement**.
- K. For three phase units, verify direction of rotation of blower wheels (note direction arrows on the blower wheel housing). Correct if needed by changing polarity of three phase power.
- L. VERY IMPORTANT Using a clamp meter, measure the amperage to each motor and ensure that they do not exceed the amperage listed on the product label.

M. If applicable, adjust the air intake grille(s) such that the output air stream reaches the floor. For temperature control and environmental separation applications, the air stream should reach the floor with sufficient strength to create an air seal around the door opening without creating turbulent mixing of the inside and outside air. For flying insect control applications, the air stream should reach the floor with maximum strength. If after proper installation and adjustment, the product appears to be producing too little or too much air for the application, contact the manufacturer.

# MAINTENANCE

Routine maintenance is required to keep this product operating at its peak performance and efficiency. Over time, the housing, air intake grille, air intake filter, blower wheels and motor(s) will accumulate a buildup of dust, debris and other residue. It is imperative to keep these components clean. Failure to do so will not only lower operational efficiency and performance, but also reduce the useful life of the product. The time between cleanings

To reduce the risk of fire, electrical shock, or injury to persons, observe the following:

- A. Maintenance is to be performed only by qualified personnel who are familiar with local codes and regulations and are experienced with this type of product.
- B. Before servicing or cleaning the product switch power off at service panel and lock service panel to prevent power from being switched "ON" accidentally.

depends on the application, location, and daily hours of use. On average, under normal use conditions, the product should require a thorough cleaning once every six (6) months.

# To clean the product, perform the following:

- 1. Verify the product has been disconnected from the power source.
- 2. Use a damp cloth and either a warm mild soapy water solution or bio-degradable degreaser, to wipe down the exterior components of the housing.
- 3. To access the interior of the product, remove the air intake grille and/or air intake filter. This is accomplished by removing the eight (8) self-tapping screws on the face of each air intake grille/filter.
- 4. Thoroughly clean the air intake grille/filter.

- 5. Remove the motor fan assembly (MFA) from inside the air curtain housing. This is accomplished by loosening the watertight fitting and pulling the cord out (3 phase power) or by the quick disconnect plug on the motor (1 phase power). Then remove the two (2) wing nuts on the out-board sides of the MFA pan. Care should be taken to avoid the MFA from tipping over.
- 6. Remove the MFA from the unit and thoroughly wipe down the motor, blower wheels and blower wheel housings. Be careful not to submerge the motor in water or spray it with a water hose.
- 7. The motor(s) require no additional lubrication. They are permanently lubricated and feature double sealed ball bearings.
- 8. To re-install the product, reverse the procedures above.
- 9. Reconnect the power source to the product
- 10. If you have any questions regarding the maintenance of the product, contact the manufacturer.

## SPECIAL APPLICATIONS

## **Outdoor Installation**

For outdoor unit special consideration may be required for enclosure, motor, wheel, and other components to minimize damage caused by exposure to the outdoor elements. Contact factory for special construction and costing.

## Freezer and Cooler Installation

Air curtain must be mounted on the warm side for optimal performance. Variable Frequency Drive (VFD) is strongly recommended to control the air curtain air flow velocity at the floor level.

High humid areas may require de-humidifier or additional defrost cycle to minimize condensation and freezing for freezer applications. We recommend the air curtain unit to not replace doors but work in conjunction with door opening sequence cycle. Contact factory for details.

# CAUTION

The appliance is not to be used by persons (including children) with reduced physical, sensory, or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction. Children are not to play with the appliance.

## DISCLAIMER

# HEATED PRODUCTS SUPPLEMENT

#### NOTE

Before proceeding, refer to the unit's specific IOM Manual for safety, installation, and startup information. Verify proper voltage to the product per local and NEC codes. Ensure proper rotation for units with three phase motors.

#### Hot Water and Steam Heated Products

Hot water and steam heated products are certified only for indoor use. Low Profile 2, Standard 2, High Velocity 2, Extra Power 2, and Phantom series units are shipped with coils mounted in the interior of the unit. Wind Stopping and WindGuard units are shipped with coils factory mounted to the exterior of the unit.

Once the coil has been secured to the cabinet, access to the motor and fan is through the removable access panels located on the top of the cabinet for Standard 2, High Velocity 2, Extra Power 2, Phantom series, and WindGuard units.

**Note**: Low Profile 2 and Wind Stopping units require the removal of the coil to access the motor(s) and/or fans.

All piping should be done by a licensed pipe fitter and in accordance with local codes and regulations. Connect the supply and return fittings as required. All traps and valves are to be sized and field installed by others. For Standard 2, High Velocity 2, and Extra Power 2 units, front intake screen must be removed to access vent plugs. Standard coil configuration is right hand supply and left-hand return (FIGS. 3 & 4) except for Low Profile 2 series, which has supply and return connection on the same end. Optional temperature controls, if ordered, are to be field installed by others.

FIG. 3 (Hot Water Heated STD2 Unit)

FIG. 4 (Steam Heated STD2 Unit)

#### Gas Heated Products

Gas heated products are certified only for indoor use. The product consists of three major components: the air curtain, the transition section(s), and the indirect gas fired duct furnaces(s) (FIG. 5).

The transition section(s) are shipped knocked down and are to be field assembled and installed per their supplemental instructions (FIG. 6). Exceptions are the Wind Stopping (WMI, WMH) and WindGuard (BD) series, which are shipped with fully assembled transitions.

3/8" THREADED RODS BY OTHERS

FIG. 5 (Indirect Gas Fired Heated HV2 Unit)

#### Note:

- 1. Assemble the transition section(s).
- 2. Measure the width of the transition section(s) to determine the best installation location for the duct furnace(s).
- 3. The duct furnace(s) are typically suspended from above with threaded rods. The duct furnace(s) must be centered and equally spaced with a 2" clearance between the furnace(s) and the transition section(s).
- 4. Install the adjustable blank off plates to close the gaps in the transition section(s) and secure the flanges to the transition section(s).

All gas piping and duct furnace exhaust venting should be done by a licensed pipe fitter and in accordance with local codes and regulations. Power vented exhaust duct runs should not exceed 100' for horizontal venting. See <u>furnace</u> <u>installation manual</u> for additional piping and other details.

In the United States, installation must conform to local codes or,

in the absence of local codes, with the latest edition of the National Fuel Gas Code (ANSI Z223.1/NFPA 54). Further

reference should be made to the recommendation of your fuel supplier. In Canada, installation must conform with local codes or, in the absence of local codes, with the latest edition of the Installation Code for Gas Burning Appliances and Equipment (CAN/CGA B149.1). Further reference should be made to the recommendation of your fuel supplier.

# TROUBLESHOOTING

PROBLEM	CAUSE	SOLUTION
NO AIR BLOWING OUT OF DISCHARGE NOZZLE	<ul> <li>No power being supplied to the unit from the electrical power source</li> </ul>	- Confirm power source / check if in on position
	- Circuit breaker is tripped - Blown fuses on power supply	- Reset circuit breaker - Replace fuses - Allow the motor to cool down; motor has auto reset
	- Motor overload is open or tripped	internal overload; if unit is panel equipped, press reset button on overload inside panel, or replace motor overload if overload remains tripped
	- Motor contactor / relay defective (if applicable) - Failed switch	<ul> <li>Check voltage to coil; check contacts to see if they are pulling in</li> <li>Replace or repair limit switch</li> </ul>
MOTOR IS RUNNING BUT FANS ARE NOT SPINNING	- Loose or broken coupling (belt drive)	- Replace or tighten coupling
	- Loose set screws on wheel hubs - Fan spinning inside fan housing - Broken fan hub	- Tighten set screws on motor shaft flats - Tighten fan on shaft or replace fan - Replace fan wheels
ELECTRICAL CONTROLS NOT WORKING WHEN DOOR IS OPEN	- Switch is in off position	- Turn unit's switch to the on position
	- Door limit switch is not operating	- Repair or replace door limit switch
UNIT WILL NOT TURN OFF	<ul> <li>Door limit switch is permanently closed or energized</li> </ul>	<ul> <li>Position the door switch in a manner that turns off the unit when the door closes and turns on the unit when the door opens. Only light pressure required.</li> </ul>
LOW AIR FLOW	<ul> <li>Discharge air vanes out of adjustment</li> <li>Obstruction on intake or discharge</li> </ul>	<ul> <li>Adjust vanes to proper position (Refer to Start-Up Section in this manual)</li> <li>Remove obstruction or move air curtain</li> </ul>
	- Power leads out of polarity	<ul> <li>Switch power leads to correct polarity</li> <li>(3 phase models only)</li> </ul>
	- Blower motor rotating below normal speed	<ul> <li>Apply proper voltage per unit requirement (see unit label) / Adjust adjustable motor speed knob (if applicable)</li> </ul>
	- Fan rubbing against housing - Blower wheels clogged with dirt	- Free fan from housing - Clean and remove dirt from blower wheels
EXCESSIVE AIR VELOCITY AT DOOR OPENING	- Nozzle out of adjustment and not angled far out enough (BD only)	- Adjust nozzle angle to outside
	- Air temperature too cold	- Add auxiliary heat to overcome wind chill
	- Air stream pushing air outside of the building	- Adjust discharge angle back into building
AIR NOT HITTING THE FLOOR	- Low air velocity	- Adjust vanes to proper position or check installation height (Refer to Start-Up Section in this manual)
	- Obstruction in the direction of air flow	<ul> <li>Remove obstruction or move air curtain (Move out 3/8" for every 1" up from the door)</li> </ul>
	- Negative building pressure	<ul> <li>Provide a make-up air system to relieve negative building pressure</li> </ul>
UNEVEN AIR	<ul> <li>Shaft rotating inside fan</li> <li>One motor not functioning</li> </ul>	- Replace fan or tighten fan on shaft - Replace or repair motor
EXCESSIVE NOISE AND OR VIBRATION	- Loose or broken coupling (belt drive)	- Replace or tighten coupling
	<ul> <li>Loose set screws on wheel hubs</li> <li>Fan spinning inside fan housing</li> <li>Broken fan hub</li> <li>Bearing end caps worn</li> <li>Damaged blower wheel</li> <li>Bearing end caps worn</li> <li>Pillow block bearings make noise</li> </ul>	<ul> <li>Tighten set screws on motor shaft flats</li> <li>Tighten fan on shaft or replace fan</li> <li>Replace fan wheels</li> <li>Replace Bearing end caps</li> <li>Replace Blower Wheel</li> <li>Replace Bearing end caps</li> <li>Grease Bearing</li> </ul>
	<ul> <li>Bearing end caps worn</li> <li>Pillow block bearings make noise</li> <li>Balancing clips missing</li> </ul>	- Replace Bearing end caps - Grease Bearing - Replace Blower Wheel

# TROUBLESHOOTING MOTOR

To determine if the motor is in good operating condition, compare measured motor resistance at the motor terminals to the values shown below.

## WARRANTY

Mars' warranty coverage, period, extent, and limitations apply to the product only. It does not apply to labor. Mars warrants that the Mars product 1) is free from defects in materials and workmanship, and 2) conforms to Mars' published specifications. The warranty period for Mars products (except for heated models, custom models, or WMI, WMH and BD models) is a five (5) year period commencing on the date of shipment. The warranty for heated models is an eighteen (18) month period, the warranty for custom models and for accessories is a twelve (12) month period, and the warranty for WMI, WMH, and BD models is a twelve (12) month period. The date on the customer's invoice is the date of shipment unless Mars or your reseller informs you and Mars otherwise. Mars will provide free replacement of any part that fails as a result of a defect in material or manufacturer's workmanship. Changes in operational specification parameters that differ from those provided on the original purchase order are not covered. Mars products are inspected and tested before packaging and are shipped in working condition. The warranty for Mars products only covers free-of-charge replacement of failed parts. The warranty does not cover labor and transportation expenses that may be required to deliver and to install replacement parts. Because in many instances it is impossible to determine the cause of failure, the customer may be responsible for transportation charges associated with replacement of failed part. Mars does not warrant uninterrupted or error-free operation of Mars product. Under no circumstance is Mars liable for any of the following: 1) third-party claims against you for damages, 2) special, incidental, or indirect damages, or 3) any economic consequential damages (including lost profits and savings), regardless of whether Mars, its suppliers, or its resellers were informed of the possibility of damages. The warranty does not cover repair or exchange of Mars products resulting from misuse, accidental damage, modification, unsuitable physical or operating environment, improper maintenance or installation by customer, or failure caused by a product for which Mars is not responsible. The warranty does not cover damages caused by mishandling during transportation. The warranty is voided by removal or alteration of Mars product or parts identification labels, and by improper installation of product and resulting non-compliance with federal, state, and local codes and regulations. Additionally, Mars reserves the right to void the warranty for non-payment of invoice.

# SECTION 23 34 33

# AIR CURTAINS

Important Note: This specification contains hidden text appearing in red. To show or remove hidden text in MSWord, click the "File" tab or "Office" icon on the top-left corner, select "Options," select "Display," and check or uncheck the box marked "Hidden Text."

## PART 1 GENERAL

#### 1.1 SECTION INCLUDES

- A. Air curtains for pedestrian entrances.
- B. Air curtains for vehicular entrances.
- C. Air curtains for large loading dock doors.

## 1.2 RELATED SECTIONS

- A. Section 05 50 00 Metal Fabrications: Concealed steel support members.
- B. Section 06 10 00 Rough Carpentry.
- C. Section 05 41 00 Structural Metal Studs.
- D. Section 07 62 00 Sheet metal flashing.
- E. Section 07 92 00 Joint Sealants.
- F. Section 08 10 00 Metal Doors and Frames.
- G. Section 08 33 00 Overhead Coiling Doors.
- H. Section 08 42 00 Entrance Doors.
- I. Section 22 10 00 Plumbing Piping:
- J. Section 23 21 00 Hydronic Piping: Hot water heating piping to units.

- K. Section 23 22 13- Steam and Condensate Piping: Steam heating piping to units.
- L. Section 26 05 00 Equipment Wiring: Connections to building power distribution.

## 1.3 REFERENCES

- A. ASTM A240 / A240M -10 Standard Specification for Chromium and Chromium.
- B. ASTM A591 / A591M -98 Standard Specification for Steel Sheet, Electrolytic Zinc-Coated, for Light Coating Weight (Mass) Application (Withdrawn in 2005, replaced by A879/A879M).
- C. ASTM A879 / A879M -06 Standard Specification for Steel Sheet, Zinc Coated by the Electrolytic Process for Application Requiring Designation of the Coating Mass on Each Surface.
- D. ASTM A653 / A653M -09a Standard Specification for Steel Sheet, Zinc Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
- E. AHRI 410-2001 Standard for Forced-Circulation Air-cooling and Air-Heating Coils.
- F. CRN Canadian Registration Number Coil.
- G. ANSI Z223-NFPA 54 National Fuel Gas Code/
- H. NEC National Electric Code.

#### 1.4 SUBMITTALS

- A. Submit under provisions of Section 01 33 00.
- B. Product Data: Manufacturer's data sheets on each product to be used, including:
  - 1. Preparation instructions and recommendations.
  - 2. Storage and handling requirements and recommendations.
  - 3. Installation methods.
- C. Shop Drawings: Include plans, elevations, sections, and details, indicating dimensions, tolerances, materials, fasteners, hardware, finish, piping, electrical wiring diagrams, options, and accessories.
- D. LEED Submittals: Provide documentation of how the requirements of Credit will be met:
  - 1. List of proposed materials with recycled content. Indicate post-consumer recycled content and pre-consumer recycled content for each product having recycled content.
  - 2. Product data and certification letter indicating percentages by weight of postconsumer and pre-consumer recycled content for products having recycled content.

- E. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.
- F. Verification Samples: For each finish product specified, two samples, minimum size 6.25 inches (160 mm) square, representing actual product, color, and patterns.
- G. Manufacturer's Certificates: Certify products meet or exceed specified requirements.
- H. Operation and Maintenance Manual: Submit manufacturer's operation and maintenance manual, including operation, maintenance, adjustment, and cleaning instructions, troubleshooting guide, parts list, and electrical wiring diagrams.

#### 1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Minimum ten years documented experience producing the products specified in this Section
- B. Installer Qualifications: Minimum five years documented experience installing products specified in this Section

#### 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store products in manufacturer's unopened packaging until ready for installation.
- B. Store in a dry, heated storage area until installation of products.
- C. Protect materials and finish from damage during handling and installation.

#### 1.7 SEQUENCING

- A. Ensure that locating templates and other information required for installation of products of this section are furnished to affected trades in time to prevent interruption of construction progress.
- B. Coordinate the installation of wiring and control switches for air curtains with the openings and the hardware provided for such openings.
- C. Install after doors, walls, ceilings, and other adjacent surfaces are finished and painted.

#### 1.8 WARRANTY

- A. Standard five-year limited parts warranty for unheated units against defects in workmanship and material.
- B. Standard 18-month limited parts warranty for heated units against defects in workmanship and materials.

## PART 2 PRODUCTS

#### 2.1 MANUFACTURER

- A. Acceptable Manufacturer: Mars Air Systems, LLC; 14716 South Broadway St., Gardena, CA 90248. Tel: (310) 532-1555 or (800) 421-1266. Fax: (310) 324-3030. Email: info@marsair.com. Web: www.marsair.com.\_
- B. Delete one of the following two paragraphs: coordinate with requirements of Division 1 section on product options and substitutions.
- C. Requests for substitutions will be considered in accordance with provisions of Section 01 33 00.

#### 2.2 AIR CURTAIN ASSEMBLIES

- A. Motor Fan Assembly: Design for easy removal, assembly, repair and maintenance.
  - 1. Motor: Totally enclosed air over (TEAO) cooled motor with sealed lifetime prelubricated ball bearings, motor starter and thermal overload protection.
    - a. Wired for single speed operation.
    - b. Provide wash down type motors, NEC IP-54 for the locations indicated.
    - c. Provide explosion proof type motors, NEC Class 1, Division 1, Group D for the locations indicated.
    - d. Electrical Characteristics: 115V AC, single phase; 30.0 Amp full load per motor/fan.
    - e. Electrical Characteristics: 208/230V AC, single phase; 16.5/15.0 Amp full load per motor/fan.
    - f. Electrical Characteristics: 208/230V AC, three-phase; 8.3/7.6 Amp full load per motor/fan.
    - g. Electrical Characteristics: 460V AC, three-phase; 3.8 Amp full load per motor/fan.
    - h. Electrical Characteristics: 575V AC, three-phase; 3 Amp full load per motor/fan.
    - i. Meets NEC. ETL Listed to conform to UL 507 (US) and CSA22.2 (Canada) Standards. AMCA 211 Certified.
  - 2. Fans: Forward curved centrifugal type, double width, and double inlet design, directly driven to an electric motor.
    - a. Provide resilient isolation dampening mountings between motor frame and motor mounting pan.
    - b. Factory balanced blower wheel assembly statically and dynamically.
- B. Housing: Self-contained one-piece type with sufficient strength for mounting from prepunched mounting holes at both ends to adjacent walls or ceiling without intermediate support.
  - 1. Size:
    - a. Unheated: 15 5/8 inches deep by 14 inches high (including discharge nozzle) by width of unit.
    - b. Electric Heated: 21 3/8 inches deep by 14 inches high (including discharge nozzle) by width of unit.

- c. Hot Water/Steam Heated: 21 3/8 inches deep by 14 inches high (including discharge nozzle) by width of unit plus 10 inches for manifolds.
- d. Indirect Fired Gas Heated: 68 1/8 inches deep by 34 inches high (including discharge nozzle) by width of unit.
- 2. Mounting:
  - a. Unheated Inside Mount.
  - b. Heated Inside Mount.
  - c. Unheated Outside Mount.
  - d. Mount Location Indicated.
- 3. Material:
  - a. Provide 18- and 20-gauge electro or hot dipped galvanized steel sheet housing conforming to ASTM A 591 and/or ASTM A 653.
  - b. Provide type 304 stainless steel housing with brushed finish. ASTM A 240/A 240M.
- 4. Air Inlet Grille and/or Filters: Provide air inlet grille and/or filters specified.
- 5. Discharge: Provide integral discharge nozzle specified.
- 6. Finish and Color: Provide with, no VOC, corrosion resistant polyurethane powder coated finish for sheet metal housings.
  - a. Titanium Silver.
  - b. Obsidian Black.
  - c. Pearl White.
  - d. Titanium Silver.
  - e. Stainless Steel.

C. Environmental and Flying Insect Control Air Curtains: Models for Heights to 16 feet (4877 mm) for Environmental Separation and Temperature Control and 14 feet (4268 mm) for Flying Insect Control.

- 1. Discharge Nozzle: Adjustable air foil vanes with a plus/minus 40-degree sweep front to back.
- 2. Air Velocity at Nozzle:
  - a. EP296-2: 96 Inch (2440 mm) Wide Units: 4800 feet/min (24.4 m/s) two 3HP motor/fan assemblies.
  - b. EP2108-2: 108 Inch (2743 mm) Wide Units: 4200 feet/min (21.3 m/s) two 3HP motor/fan assemblies.
  - c. EP2120-2: 120 Inch (3050 mm) Wide Units: 3840 feet/min (19.5 m/s) two 3HP motor/fan assemblies.
  - d. EP2120-3: 120 Inch (3050 mm) Wide Units: 5760 feet/min (29.3 m/s) three 3HP motor/fan assemblies.
  - e. EP2144-3: 144 Inch (3660 mm) Wide Units: 4800 feet/min (24.4 m/s) three 3HP motor/fan assemblies.
- 3. Air Inlet Grille and Filters:
  - a. Location: Front.
  - b. Type: Fixed air intake grille.
    - 1) Filter: Aluminum mesh, 1/4 inch (6.4 mm), washable.
  - c. Type: Filter Only as follows:
    - 1) Filter: Flat bank 1-inch, disposable.
    - 2) Filter: Flat bank 2-inch, disposable.

- 3) Filter: Aluminum mesh, 1/4 inch (6.4 mm), washable.
- d. Speed: 4800 cu ft/min (2265 L/s), minimum, per motor/fan assembly.
- 4. Sound Pressure Level At 10 feet (3 m) From Nozzle:
  - a. Two Motor/Fan Units: 79 dBA.
  - b. Three Motor/Fan Units: 81 dBA.

#### 2.3 COMPONENTS

- A. Electric Heaters: Provide complete with motor control panel factory mounted to air curtain housing, and thermostat to be field installed.
  - 1. Temperature limit controller.
  - 2. Thermostat: Wall-mounted, 24-Volt operation, with heater on/off selection.
  - 3. Heating Coils: Electrical components UL/CUL listed.
- B. Steam Heaters: Provide finned tube steam coils for field mounting on air intake side of the air curtain cabinet with opposite end connections.
  - 1. Meets NEC and CEC tested by ETL Certified to conform to UL1995(US) and CSA22.2 (Canada) Standards.
  - 2. Output: Air curtain manufacturer's standard, one-row coils.
  - 3. Output: Air curtain manufacturer's standard, two-row coils.
  - 4. Coils: Certified in accordance with AHRI 410.
  - 5. Connections: Opposite end.
  - 6. Connections: Same end, right hand.
  - 7. Connections: Same end, left hand.
  - 8. Casing: One-piece unpainted galvanized steel, bolted to air curtain housing.
  - 9. Supply and return fittings on ends of casing.
  - 10. Steam Distributing coil required for 8 feet and above for same end coils. Dual supply, Single returns.
  - 11. Thermostat: Wall-mounted, 110-Volt operation, with heater on/off selection.
  - 12. Thermostat: Wall-mounted, 208/230-Volt operation, with heater on/off selection.
- C. Hot Water Heaters: Provide finned tube water coils for field mounting on air intake side of the air curtain cabinet with opposite end connections.
  - 1. Meets NEC and CEC tested by ETL Certified to conform to UL1995(US) and CSA22.2 (Canada) Standards.
  - 2. Output: Air curtain manufacturer's standard, one-row coils.
  - 3. Output: Air curtain manufacturer's standard, two-row coils.
  - 4. Coils: Certified in accordance with AHRI 410.
  - 5. Connections: Opposite end.
  - 6. Connections: Same end, right hand.
  - 7. Connections: Same end, left hand.
  - 8. Casing: One-piece unpainted galvanized steel, bolted to air curtain housing.
  - 9. Supply and return fittings on ends of casing.
  - 10. Thermostat: Wall-mounted, 110-Volt operation, with heater on/off selection.
  - 11. Thermostat: Wall-mounted, 208/230-Volt operation, with heater on/off selection.
- D. Gas Heaters: Provide field mounted indirect natural gas fired, power vented duct furnace, with aluminized steel heat exchanger and die-formed stainless steel insert burners; manifolds, orifices, flame sensor, and igniter easily removable as an assembly.

- 1. Output: Air curtain manufacturer's standard.
- 2. Complies with:
  - a. Canadian Standards Association (CSA) labeled for US and Canadian application.
  - b. ANSI Z223/NFPA 54 National Fuel Gas Code.
  - c. CAN/CGA B149.1 Installation Codes for Natural Gas Burning Appliances and Equipment.
- 3. Fuel Type: Provide orifices for:
  - a. Natural gas.
  - b. LP.
- 4. 24 V control voltage transformer.
- 5. Combination single-stage gas control system with regulated combination redundant gas valve and intermittent spark pilot with electronic flame supervision.
- 6. Optional 2 stage.
- 7. Optional Modulation Gas.
- 8. Limit and safety controls.
- 9. Thermostat: Wall-mounted, 24-Volt operation, with heater on/off selection.
- E. Motor Control Panels for Unheated Units: Recommended for all three-phase units and single-phase units with combined motor capacities of more than 1 HP whenever a door limit switch is used to automatically start and stop the air curtain. Provide motor control panels as follows:
  - 1. Mounting: Shipped loose to be field mounted.
  - 2. Mounting: Factory mounted on right hand side of air curtain housing.
  - 3. Mounting: Factory mounted on left hand side of air curtain housing.
- F. Motor Control Panels for Electric Heated Units: Recommended for all three-phase units and single-phase units with combined motor capacities of more than 1HP whenever a door limit switch is used to automatically start and stop the air curtain. Motor Control Panel is included for all electric heated units. Thermostat is provided for field installation. Provide motor control panels as follows:
  - 1. Mounting: Factory mounted on the inside of air curtain housing.
  - 2. Mounting: Factory mounted on right hand side of air curtain housing
  - 3. Mounting: Factory mounted on left hand side of air curtain housing.
- G. Motor Control Panels For Hot Water, Steam and Gas Heated Units: Recommended for all three-phase units and single phase units with combined motor capacities of more than 1HP whenever a door limit switch is used to automatically start and stop the air curtain. Provide motor control panels as follows:
  - 1. Mounting: Shipped loose to be field mounted.
  - 2. Mounting: Factory mounted on right hand side of air curtain housing.
  - 3. Mounting: Factory mounted on left hand side of air curtain housing.
  - 4. Provide with remote mount thermostat for field installation.
- H. Motor Control Panels for Gas Heated Units: Recommended for all units whenever a door limit switch is used to automatically start and stop the air curtain. Thermostat is included with optional motor control panel for field installation. Provide motor control panel as follows:

- 1. Control Panel: Includes increased transformer for power venter(s) with integrated 24-Volt thermostat with furnace and motor controls.
- 2. Thermostat: Wall-mounted, 24-Volt operation, with heater on/off selection
- 3. Mounting: Factory mounted on right hand side of air curtain housing.
- 4. Mounting: Factory mounted on left hand side of air curtain housing.
- I. Door-Activated Limit switch(s): Provide, field installed 250-Volts, 20 amps limit switch to control air curtain(s) as follows; Automatic on/off control, activates air curtain when door is opened and turns off when door is closed. Provide limit switch for direct control one 1 HP or up to two 1/2 HP single phase motors without a separate control panel. Provide a separate control panel for three-phase motors and/or units exceeding 1 HP, 250-Volts or 20 amps controlled by a limit switch.
  - 1. Type: Combination plunger/roller switch for swing and sliding doors.
    - a. Provide limit switches with NEMA 1 (20 amps) ratings in locations indicated.
    - b. Provide limit switches with NEMA 4X (10 amps) ratings in locations indicated.
    - c. Provide limit switches with NEMA 4X (15 amps) ratings in locations indicated.
    - d. Provide limit switches with NEMA 7 (10 amps) ratings in locations indicated.
  - 2. Operation for Unheated Units: Automatic on/off control, on when door is opened, off when door is closed.
  - 3. Operation for Gas Heated Units: Automatic on when door is opened, off after time delay period (60 seconds) after door is closed.
- J. Provide mounting hardware as required for the opening.

#### PART 3 EXECUTION

#### 3.1 EXAMINATION

- A. Verify that required utilities are in correct location and are of correct capacities for specified products.
- B. Verify openings to receive air curtains are plumb, level, square, accurately aligned, correctly located, and in tolerance.
- C. Examine surfaces to receive air curtains. If surface preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

#### 3.2 INSTALLATION

- A. Install air curtains in accordance with approved shop drawings and manufacturer's printed installation instructions.
- B. Install air curtains plumb, level, square, true to line, and weathertight, without warp or rack.

- C. Anchor air curtains securely in place to supports.
- D. Coordinate with sheet metal flashing as specified in Section 07 62 00.
- E. Install joint sealants as specified in Section 07 92 00.
- F. Coordinate with electrical power as specified in Section 26 05 00.
- G. Install door limit switches and adjust for correct operation.
- H. Provide connection to piped services and utilities as specified in Section 22 10 00 and 23 21 00.

#### 3.3 FIELD QUALITY CONTROL

- A. Adjust air curtains to function properly.
- B. Adjust air foil vanes located within the discharge nozzle as required for prevailing conditions at each opening.
- C. Check heated air curtain performance on a calm day by measuring air temperature 6 inches off the floor. Optimal reading is halfway between the temperature inside and outside the building.

#### 3.4 CLEANING

- A. Clean air curtains promptly after installation in accordance with manufacturer's instructions.
- B. Repair minor damages to finish in accordance with manufacturer's instructions and as approved by Architect.
- C. Remove and replace damaged components that cannot be successfully repaired as determined by Architect.

#### 3.5 **PROTECTION**

A. Protect materials and finish from damage until substantial completion.

#### 3.6 SCHEDULES

A. Refer to Air Curtain Schedule appended to this section.
